

## Context:

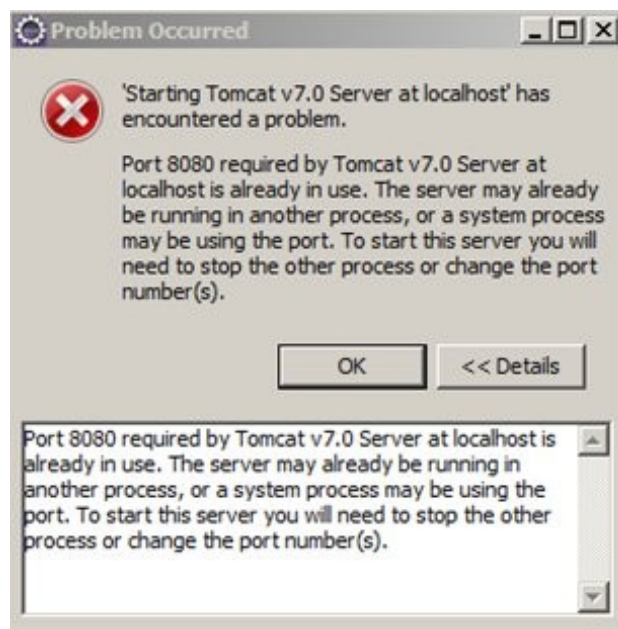

Java project developed to be executed in Apache Tomcat.

## What is happening?

Apache Tomcat tries to use the port 8080 (default port that comes configured with the installation) and this port is already being used by another program as, for example, Skype.

## How to identify the error?

When we try to execute the project in Apache Tomcat (or sometimes just start the server), it shows the following error message:

## How to correct the error?

Double click over the server, click on the tab "*Ports*". Change the "Tomcat admin port" to 8005 or another available port. It is necessary to save the changes in this file (ctrl + "s"). Now we just need to restart the server and execute the project.
